w06-P1: Add blog content with css

w06-P2: use css grid to show 3 blogs

w06-P3: use css grid (minmax) to show 9 blogs

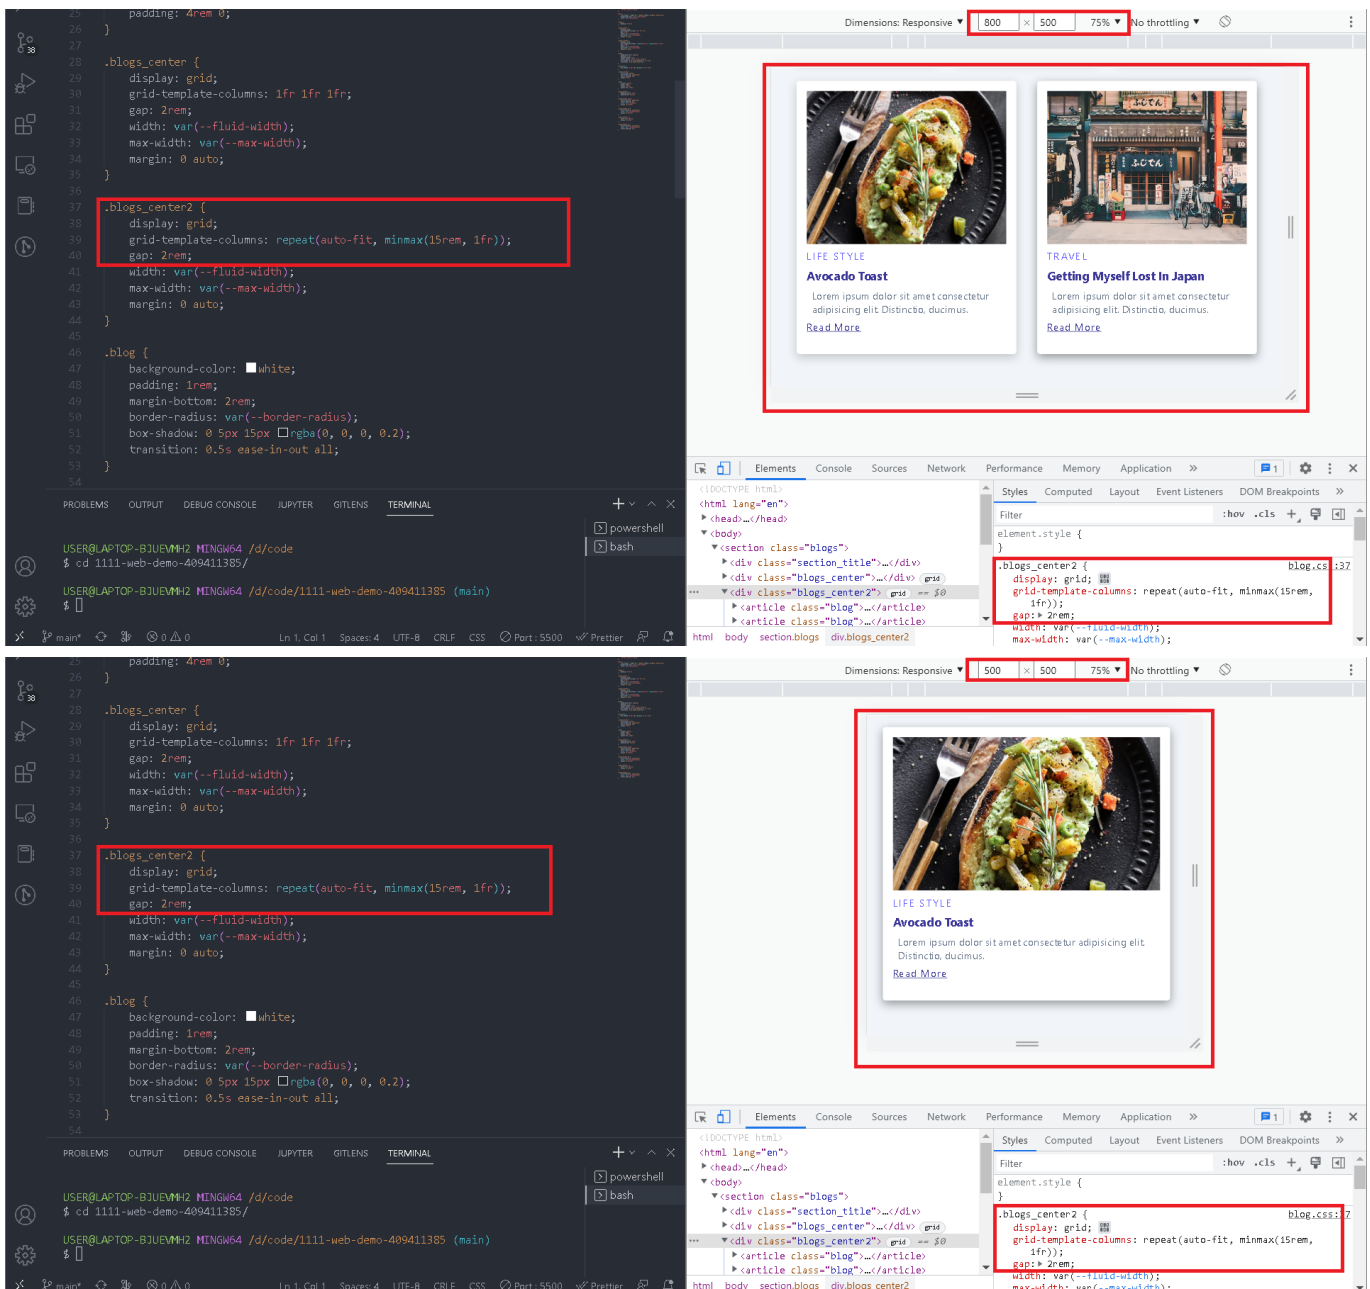

The image illustrates the process of creating a responsive blog grid using CSS Grid. It is divided into two main sections, each showing a code editor, a browser preview, and the Chrome DevTools interface.

**Top Section (1250px width):**

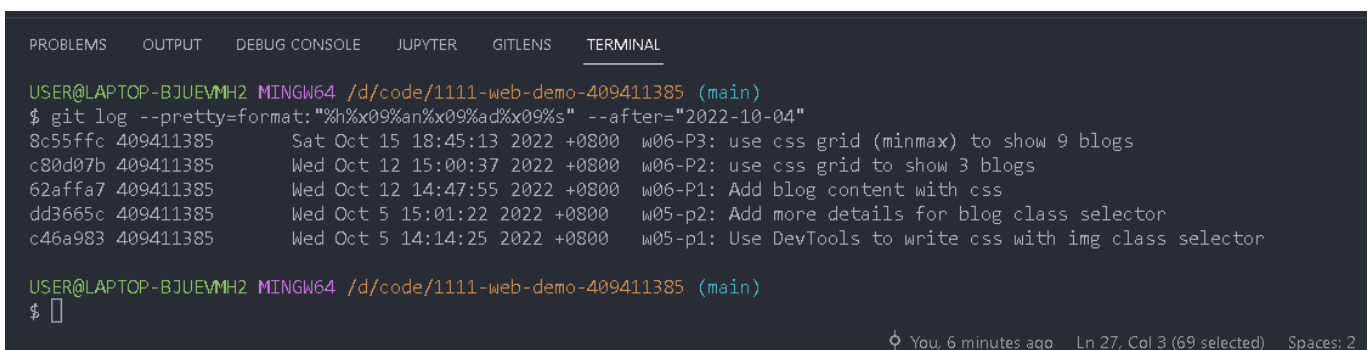

- Code Editor:** Shows CSS for `.blogs_center2` and `.blog`. `.blogs_center2` is a grid with `repeat(auto-fit, minmax(15rem, 1fr))` columns. `.blog` has a white background, padding, and a box shadow.
- Browser Preview:** A desktop view showing a 2x4 grid of blog cards. Each card has a title, a placeholder image, and a 'Read More' link.
- DevTools:** The 'Styles' panel shows the active styles for `.blogs_center2`, including the grid template columns.

**Bottom Section (1000px width):**

- Code Editor:** Similar CSS, but the grid template columns are adjusted to `repeat(auto-fit, minmax(15rem, 1fr))` to maintain consistency.
- Browser Preview:** A desktop view showing a 2x3 grid of blog cards, demonstrating how the grid adapts to a slightly different width.
- DevTools:** The 'Styles' panel shows the active styles for `.blogs_center2`, highlighting the grid template columns.
